

1550nm chirped fiber grating CFBG

● Product Description

Chirped fiber grating is a special grating whose grating period changes along the longitudinal direction of the optical fiber. We use a phase mask to write chirped gratings. By adjusting the reflection intensity of the chirped grating, it can be used as a gain flattening filter. At the same time, its ultra-wide reflection bandwidth can be used to serve distributed systems.

● Product features

Large bandwidth、 low insertion loss 、 high reflectivity

● Part Number

MP-CFBG-1550-10-99-SA

● Application area

Gain flattening filter、 Dispersion compensation、 Fiber to the home、
 Coarse wavelength division multiplexing system

● Core parameters

Center Wavelength	Reflectivity	Bandwidth
1550nm	10-99%	10nm

● General Parameters

Product parameters:

Parameters	Unit	Value
Central wavelength	nm	1550nm & 1650nm
Reflectivity	%	10~99
Bandwidth	nm	10 (typical)
Insertion loss	dB	<0.5
Fiber termination	-	Bare Fiber, FC/UPC Or FC/APC
Fiber type		SMF-28 Or Compatible
