

1550nm High Power PM Fiber Laser 2W

● Product Description

With optimized optical properties, 1550nm single-mode DFB is an ideal choice for demanding sensing system applications. The innovative chip design has suppressed high-order longitudinal and transverse modes while maintaining linear polarization stability. The laser has high output power (Max. 50W output), narrow line width and good consistency, and is currently favored by domestic scientific research customers. At present, our existing inventory wavelengths cover 1000-2400nm. For certain specific

areas of use of customers, we can provide customers with customized chip screening services.

● Product features

Ultra-narrow linewidth: <10MHz、 No mode hopping、 High stability and reliability、 Continuously adjustable output power, with LCD status display.
