

# 1310nm LiNbO<sub>3</sub> High Frequency Phase Modulator 10GHz

## ● Product Description

The 1310/1550nm lithium niobate (LiNbO<sub>3</sub>) high frequency phase modulator uses titanium diffusion or proton exchange technology to make optical waveguides. The input and output optical fibers are precisely obliquely coupled to the waveguides, and the electro-optical effect of lithium niobate materials is used to achieve phase modulation of optical signals. Titanium diffusion (Ti-indiffusion) or proton exchange (APE) waveguide technology

can obtain birefringence or single polarization phase modulation respectively.
