

1120nm 50mW SM DFB laser diode

● Product Description

Distributed Feedback (DFB) and Distributed Bragg Reflector (DBR) laser diodes are light sources emitting an extremely narrow spectral line with a bandwidth below 5 MHz and a typical Side-Mode Suppression Ratio (SMSR) > 40 dB. Based on GaAs, idealphotonics' DFB and DBR lasers utilize InGaAs Quantum Well (QW) or InAs/GaAs Quantum Dot (QD) active regions and proprietary chip designs, covering the 970–1330 nm spectral range. To date, DFB and DBR lasers are common laser types, especially for use in scientific research and operations. Both laser types operate in a single longitudinal mode and are highly reliable in terms of efficiency, spectral purity, and long-term performance across various applications.

● Product features

Precise wavelength; stable output; single longitudinal mode narrow linewidth; low noise design; industrial-grade package

● Part Number

MP-DFB-1120-50-A81-14BF-SA

● Application area

Fiber laser pumping | Biomedical imaging | Spectral analysis | Cold atom physics | Industrial sensing

● Core parameters

Central Wavelength	Output Power
1120nm	50mW

● Dimension Drawing

● General Parameters

@ CW, Module mounted on heat sink at room temperature

Parameter	Min.	Typ.	Max.	Unit
Chip Temperature	20	25*	40	°C
Forward Current	—	300	350	mA
Output Power**	5	—	50	mW

*May vary depending on selected wavelength in some cases

**No kinking over full operating range

Characteristics

@ CW, 25°C*, 350 mA

Parameter	Min.	Typ.	Max.	Unit
Output Power @ 220 mA	50	—	—	mW
Forward Voltage	—	1.5	3.5	V
Threshold Current	—	30	90	mA
Peak Wavelength** (customer selectable)	1120	—	1200	nm
Peak Wavelength Tolerance	—	—	±1	nm
Wavelength Tuning vs. Temperature	—	110	—	pm/°C
Wavelength Tuning vs. Current	—	2	—	pm/mA
Side Mode Suppression Ratio (SMSR)	40	50	—	dB

Parameter	Min.	Typ.	Max.	Unit
Linewidth (self-heterodyne @ 80 MHz)	—	1	5	MHz
Polarization Extinction Ratio (PER)	15	18	—	dB
Polarization	—	TE	—	—

*Temperature may vary from 20 to 40°C depending on selected wavelength in some cases

**Achievable within wavelength tolerance at output power > 50 mW |

Notes

1 Free-space optical design

2 Any wavelength within this range is available with ± 1 nm tolerance

Safety and Operating Instructions

The device emits invisible light that may be harmful to human eyes. Avoid direct eye exposure to the fiber connector during operation. When operating with the connector open, appropriate laser safety goggles must be worn.

Absolute maximum ratings shall be applied to the device only for short periods.

Prolonged exposure to maximum ratings or exposure to more than one maximum rating may damage the device or degrade its reliability. Operation

beyond the absolute maximum ratings may result in device failure or safety hazards.

A suitable power supply must be used to ensure the maximum forward current is not exceeded.

The device requires a proper heat sink. It must be mounted using 4 screws (cross-tightened with an initial torque of 0.075 Nm and final torque of 0.15 Nm) or a clamp. Flatness deviation of the heat sink surface must be less than 0.05 mm. Indium foil or soft thermally conductive material is recommended as the thermal interface between the package base and heat sink. Thermal grease is not recommended.
